

GENERAL DESCRIPTION

InstaGreen Sedum Carpet is pre-grown rolls of sedum vegetation. Sedum Carpet is grown with anywhere from 9 - 15 varieties of sedum plants sown randomly throughout the rolls.

BASIC USE

InstaGreen Sedum Carpet is designed to be delivered to the site and immediately placed over LiteTop® growing media in a Hydrotech extensive Garden Roof® Assembly.

TECHNICAL DATA

ROLL DIMENSIONS:	48 in. wide x 75 in. long (1.2 m x 1.9 m)
WEIGHT:	5.0 lb/ft ² (fully saturated); 125 lb./roll (24.4 kg/m ² ; 56.7 kg)
COVERAGE:	25 ft ² per roll (2.3 m ²)
FIBER/SOIL BASE:	approx. 1 in. thick

INSTALLATION

- Every attempt should be made to install the Sedum Carpet the day it arrives.
- Pallets waiting to be installed should be stored in a cool, shady place.
- If Sedum Carpet cannot be installed the day it arrives, it must be unrolled in a cool, shady place and watered thoroughly. It cannot be allowed to remain rolled and on pallets for more than 6 hours.
- Water the area thoroughly well before planting in order to give the water time to infiltrate down into the soil.
- Just before the vegetation is laid out, the soil should be raked to even out low or high areas and watered again. The vegetation will not root well if the soil is uneven or dry.
- Starting in one corner, place the Sedum Carpet and stagger the joints, making sure the rolls have good contact with the soil. Rake the soil as needed to eliminate low or high areas created by foot traffic.
- The edges of the Sedum Carpet should fit snugly against the perimeter/edging and against each other. The rolls are easily trimmed with a utility knife or heavy-duty shears. Trimmings can be used to fill in any bare spots.
