# HOT RUBBERIZED ASPHALT MEMBRANES

The background of the slide features three large, overlapping yellow triangles that point towards the right. The triangles are layered, with the one on the left being the most prominent, followed by a second triangle behind it, and a third triangle further back. The text is overlaid on the leftmost triangle.

## Source and Manufactured Credits

Credits asking for information regarding “extracted, processed, manufactured, harvested, reclaimed, salvaged, etc.” do not apply to Sika Roofing & Waterproofing products. These credits are for building materials and products where their ingredients are SOURCED AND MANUFACTURED within the region or area of the project submitting for green credits. All of Sika’s Roofing and Waterproofing products source ingredients from many vendors all over the world, and it would be impossible to know which ingredients, in which products, in any particular production run, only came from a certain area. Therefore, Sika takes the ethical position and claims that our products should not be considered for any credit related to these conditions.

## Manufacturing Location Credits

Credits asking for MANUFACTURING LOCATION ONLY of a product and not the ingredient locations also do not apply to Sika Roofing & Waterproofing products. These credits are about obtaining products within a certain radius of the project that is submitting for green credits to cut back on transportation fuel used in shipping. Sika’s products are manufactured all over the country and shipped to local warehouses and distribution centers. Sika’s products are not shipped straight from the production location to a job site. Even if the product used is only shipped 100 miles from the closest warehouse, that product had to be shipped to that location first. Therefore, Sika takes the ethical position and claims that our products should not be considered for any credit related to this condition.

With more than 100 years of experience, Sika is a worldwide innovation and sustainability leader in the development and production of systems and products for commercial and residential construction, as well as the transportation, marine, automotive, and renewable energy manufacturing industries.

Sika has subsidiaries in 102 countries around the world and, in over 400 factories, produces innovative technologies for customers worldwide. In doing so, it plays a crucial role in the transformation of the construction and transportation sector toward greater environmental compatibility. With more than 34,000 employees, the company generated sales of CHF 11.76 billion in 2024.
